The standard \$599 price is a common pricing strategy. For many small businesses, paying the full \$599 price is unrealistic, and AutoCAD is an excellent choice for them. A single user can license AutoCAD, and it can be used on one PC or Mac or on a network of PCs or Macs. A network license for AutoCAD is available for \$899. Most Macs can run AutoCAD as a stand-alone app, although it must be used in place of the native OS X application. Autodesk has a software licensing agreement with a number of graphics card manufacturers to license the use of AutoCAD to other companies. This page describes the architecture of AutoCAD. For a detailed history of AutoCAD, visit the AutoCAD history and credits page. Contents OpenGL is a specification that defines a standard, low-level, hardware-independent, application programming interface for rendering and processing 3D computer graphics. It is designed to allow multiple vendors to implement the API on their own hardware, giving the vendor control of the pipeline and thus the final appearance of the output image. OpenGL is currently implemented by graphics hardware manufacturers and by software companies. The API

specification includes the OpenGL Shading Language (GLSL), which is a compact language for writing shaders and for representing 3D objects in 2D. The OpenGL Shading Language is now deprecated. OpenGL is a standard. It is similar to Direct3D from Microsoft, although OpenGL is much more general in nature and supports many more rendering effects. Modern GPUs, or GPUs from NVIDIA, AMD, Intel, and others, support OpenGL 2.0, the OpenGL 1.0 "fixed" version, and the OpenGL 2.0 "core" version, and also OpenGL 3.x. Some GPUs support 1.5 and others support 1.2. The hardware graphics drivers are able to handle the different versions. OpenGL 1.0, or the legacy OpenGL, was released in 1999. It is now an EOL (End of Life) release
