32bits/Mac/x86. XF-a2011-32bits.exe {x86-32.Q: How to run queries on a single table using JSONB in Postgres and return a field? Consider a JSONB column named data in table products, where each row has a single array of strings. I want to do queries like SELECT \* FROM products WHERE data.name = 'foo', or SELECT \* FROM products WHERE data.color ='red'. If I run JSONB\_SEARCH('data', '{name: "foo"}') I get back the entire document, not just an array with the field name and value 'foo' within it. Is there a query that does what I want? I couldn't find one. A: SELECT array\_agg (data) from products where id=42 3e33713323
