Minoxidil-induced hypertension. The growth hormone (GH)-stimulating effect of minoxidil in 12 patients has been previously described by others. To evaluate possible effects of minoxidil therapy on blood pressure, we studied the patients after 6 to 8 weeks of treatment with minoxidil, and during a period of withdrawal from minoxidil. Minoxidil, 5 mg/day, led to an increase in systolic blood pressure, from 109 +/- 4.4 to 119.4 +/- 7.3 mm Hg, and in diastolic blood pressure, from 75.2 +/- 4.9 to 86.0 +/- 5.1. These effects were maintained for up to 4 weeks after minoxidil was withdrawn. At the end of minoxidil treatment, minoxidil was completely removed by increasing the dosing interval to every other day. The results are discussed with respect to other studies showing an increase in blood pressure after minoxidil therapy.

1. Field of the Invention The present invention relates to a one-axis encoder and an output device. 2. Description of the Related Art A one-axis encoder is a device that can determine the relative positions of three or more movable members in three dimensions. One known example of a one-axis encoder is a potentiometer that uses a resistor (see Japanese Unexamined Patent Application Publication No. 2013-258947). When such a conventional one-axis encoder is provided to output a signal indicating the relative position of a movable member, it is normally provided on the side of the movable member. This leads to problems in that the structure of the device or the shapes of the parts are likely to be complicated and the device is likely to be larger in size.

1. Field of the Invention The present invention relates generally to a low-pressure mercury vapor discharge lamp that can be used in conjunction with a reflector to direct light towards a viewer or towards a light-sensitive device, such as a detector, such as a light-sensitive solid state detector or a light-sensitive emissive device, e.g., an image intensifier, so as to produce an electrical signal corresponding to the light intensity directed towards the detector or image intensifier. 2. Background Information Light that is emitted by a surface of a cathode that is in intimate contact with mercury and that is maintained at a relatively low temperature is commonly referred
