The AutoCAD program now rivals a number of competing programs in the CAD market, such as AutoCAD LT, Pro/ENGINEER, Inventor, and DraftSight. Historical background AutoCAD originated with the 1981 introduction of AutoLISP, a

---

system which could be programmed using the AutoLISP language. AutoLISP was developed by the consulting company of the same name, and was released by Lars Vegsund, who was a part-time consultant to Autodesk on the team that developed the first AutoCAD version. AutoLISP was originally written in the course of consulting to Autodesk on the implementation of the company's first commercial CAD system, which was

---

developed on the SUN workstation and marketed as AutoCAD. In the course of implementing the CAD application, Lars Vegsund and his partner, Bob Etter, encountered a programming issue that they wanted to solve. AutoCAD was a large programming project which needed an object-oriented approach. The language, AutoLISP, was being used to design the first real-time operating system for the new CAD application. AutoLISP did

---

not provide the programming constructs that were needed to implement an object-oriented system, and so a new language was developed for the task. AutoLISP The new language, called AutoLISP, was based on the language that Lars Vegsund had been working with since 1977, called the UCSD Pascal system. UCSD Pascal was written in the mid-1970s and had been used on a number of applications, notably on workstations for General

---

Electric, Xerox, and Control Data. AutoLISP was an interpreted language, meaning that a programmer's commands were run in a step-by-step manner at each decision point in the program. AutoLISP also did not provide a compiled language, which required the programmer to re-compile the program each time the code was modified.

As a result, the language could not be easily modified in response to the requirements of a project, and it required a

---

great deal of work to change the compiler. Furthermore, since the language was interpreted, a program would have to be re-compiled every time it was executed. In 1979, Lars Vegsund and Bob Etter needed a language that provided a more rapid development environment, and they found their answer in the BCPL language. BC

Graphical programming allows a number of creative tasks to

---

be performed on the 2D and 3D models. In-place calculation, also known as editing, occurs when the user performs a change on the viewport while the application is running. While the changes may be automatic or may need to be corrected by the user, the system can still be shown as modifying the view of the model. Manipulation, such as with MOVE, ROLL, TRANSFORM or PARAMETRICALLY, involves the ability to move, rotate,

---

scale, translate or change other properties of an object in 3D. Graphical applications are primarily used for construction, analysis, technical communication and visualization. CAD applications were originally created for construction and design professionals; today, there are a growing number of such users who are not familiar with CAD terminology or terminology associated with other graphics software. This change has been attributed to

---

the proliferation of the Internet and the ease of access to applications. As a result of this shift in users, CAD applications have been adapted to meet the demands of new industries and professions, such as architecture, engineering, planning and surveying, and manufacturing. Graphical design involves the creation and editing of two-dimensional (2D) or three-dimensional (3D) diagrams, 2D or 3D drawings, 2D or 3D models or data for

---

information and presentation.  
In the 2010s, the increased availability of desktop computers and the rise of cloud computing have enabled a transition to a "democratized" CAD environment, with an increasing number of such programs available for free download, which can be used without any software or hardware licensing fees.  
History AutoCAD Free Download was originally developed at the

---

Massachusetts Institute of Technology by John Walker as a feature of an early CAD system called SCOPE. Another early CAD package is Computer Aided Drafting (CAD) implemented by Bruce L. Boss in 1979 at the University of Utah. He developed a version of CAD as a part of the first UNIX system. It was initially called COMPASS. PTC took over leadership of the project in 1985. It was then called Computer-Aided Engineering

---

(CAE). By 1986, there were four people on the project, including Charles Purcell, a chemical engineer at PTC. Purcell left the company in 1989 to form Master Model. He used CAE to develop the Master Model software package. In 1991, the system was renamed to Engineering Workbench (EWB). Purcell
