According to Dassault Systemes, AutoCAD's market share is about 4.5% in the United States and around 20% worldwide. The company claims that over 23,000 CAD offices use AutoCAD, representing more than 200 different companies that use AutoCAD. AutoCAD is a fast-moving product development cycle. Autodesk, the creators of AutoCAD, maintain regular release cycles, including AutoCAD 2017. History AutoCAD's roots can be traced to 1972, when AutoCAD was developed by the Strata Research and Design Company, a small computer software company located in Santa Monica, California. Strata originally targeted AutoCAD as a CAD application for personal computers. But AutoCAD quickly became an industry standard, and was adopted by many commercial manufacturers. AutoCAD 1.0 was released in November 1982. It was considered a major software upgrade with major functionality. It was the first version of AutoCAD for personal computers. It introduced 3D views and the concept of orthogonal views. It also included 3D drawing capabilities. It is the version of AutoCAD that runs on almost all CAD offices, especially since its release in 1982. In the mid-1980s, AutoCAD's success led to the founding of the Autodesk company, which aimed to commercialize the product for the architectural and engineering design market. Although the AutoCAD product was available for free to end users, Autodesk developed two models to sell AutoCAD: A model license was used to sell AutoCAD to small- to medium-sized businesses. A product license was used to sell AutoCAD to large businesses and governments. The AutoCAD product license was sold by Autodesk to the building design company AECOM for \$3.5 million. AECOM sold AutoCAD to the Taylor Woodrow Company for \$29 million, which was then known as the "Taylor Woodrow Autodesk". Later that year, Taylor Woodrow was bought by the Watco Corporation. Watco sold the AutoCAD product to Stonebridge Software for \$87 million. The company later changed its name to AIM Software, and sold AutoCAD to Hexagon for \$525 million. Hexagon was sold to the German-owned company Dassault Systemes in 2002 for \$2.5 billion. Dassault Systemes, later known as 3D Systems, also owns

### What's New in the?

Drawing Tools: Enhance your design work with new tools for scaling, maintaining space, and creating guides. 3D Modeling: Add dynamic floorplans and interior images to your CAD drawings with the new automatic floorplane creation option in 2D drawings. Sub-surface Modeling: Support surfaces within sub-surfaces to make it easy to model more complicated sub-surfaces. Industry-standard color naming conventions. Organize and name groups of colors together by industry standard color naming conventions. The new Import Color Names dialog (shown above) is the default color naming utility in AutoCAD and enables you to import the color names from any color chart. You can also create and name your own color charts. Color Charts: All new color charts and color scales are now built-in and ready to use. Color Charts are now available in both metric and imperial units. Improved performance for large color charts. Customizable settings including grids, color layout, and grids and colors. Improved color-by-symbol annotation. Color Scale Creation: Create and apply color scales to a drawing with the new Auto Color Scale dialog (shown above). System Requirements: To run AutoCAD on Windows, Mac, or Linux systems, you will need a computer that meets the system requirements. See the AutoCAD product requirements for more information. Structure-activity studies of monoamine oxidase-A (MAO-A) inhibitors. To investigate the active site structure and binding modes of 5-hydroxytryptamine (5-HT) selective inhibitors, we examined the structure-activity relationship for a series of the MAO-A selective inhibitors using comparative molecular field analysis (CoMFA). The results of comparative molecular similarity indices analysis (CoMSA) and comparative molecular similarity indices analysis combined with CoMFA (CoMFA/CoMSA) analyses for the 5-HT and (S)-enantiomer-5-HT selectivity correlated with the steric and electrostatic complementarity of the active site. There were differences in the steric and electrostatic complementarity, such as in the hydrogen bonding and shape of the active site. Our results may lead to a better understanding of the binding mode of the 5-HT selective MAO-A inhibitors and may help to develop new agents with improved activity and select
