AutoCAD 2020 (2020) AutoCAD refers to one of many AutoCAD brands. AutoCAD is the name of a popular and widely used digital modeling and drafting software application developed and marketed by Autodesk. AutoCAD first introduced on-screen and in-memory (work) drawing in the 1980s, and is widely regarded as a desktop program that has won the affection of CAD users. Contents History Autodesk began its AutoCAD development program with the goal of creating a program that would allow users to create engineering drawings at an affordable price, and released AutoCAD to the public in 1982. AutoCAD ran on microcomputers with internal graphics controllers, and was unique in that it was the first CAD program to introduce on-screen and in-memory (work) drawing.[3] AutoCAD is the leader in the CAD market, accounting for about 60 percent of total revenue in 2014[4] and 50 percent of all revenue in 2015.[5] The company estimates that the software has been used in more than three billion drawings since its introduction in 1982. It was the first cross-platform CAD application, with the name and logo appearing on nearly every major computing platform including PCs, workstations, tablet devices, and smartphones.[6] AutoCAD was the first CAD program to use vector graphics technology and is the only CAD product to be 100 percent vector-based. Many of the techniques for working with vectors (such as transparency and clipping) have made their way into virtually all computer graphics applications. Vectorization technology was central to the successful integration of AutoCAD into the Microsoft Windows operating system in 1996. Market share for CAD software (2014) In the last quarter of 2014, the market share for the various CAD platforms was as follows: [7] 2014 sales It is estimated that Autodesk had revenue of \$1.77 billion in 2014, with \$1.7 billion coming from AutoCAD.[8] The AutoCAD Architect platform, which includes version 20, is the most popular platform, with 25 percent of the company's total revenue in 2014. AutoCAD Engineers accounted for 20 percent of the company's total revenue in 2014, followed by AutoCAD LT at 12 percent. The company also sold a standalone version of AutoCAD through its website, which brought in 4 percent of revenue.[8] The company had approximately 16,000
