The PTC Creo Forge (formerly PTC Creo Forge 3D) (BETA) is a free Autodesk 3D CAD extension for Windows-based systems that enables remote parametric design automation for AutoCAD users. The design tool extends AutoCAD by automating functions and modeling more accurately to quickly turn graphical concepts into detailed, physical models. The extension is built on top of ObjectARX, so the result is a plug-in, in-app product, rather than a standalone application. MicroStation is an industry standard GIS product built on top of ObjectARX and AutoCAD. It is licensed by MicroStation Technologies Inc. It will appear until late next month, according to the billboard company. It's the first time they've put up a billboard in Times Square in a presidential year, the company said. "The message is clear," the billboard's copy reads. "Vote Trump 2020. He'll Make America Great Again." "Trump is the best at getting things done, whether he's bringing jobs back to America, confronting ISIS, cutting regulations, or stopping illegal immigration," the copy on the billboard reads. The company, American Traffic Solutions, said that the sign will be one of the largest "Trump 2020" billboards ever erected. The company spent about $30,000, according to its website. The billboard's copy was provided by the Trump campaign, which said the billboard is part of its "Get out and Vote!" effort for the 2020 election. "Look, it's easy to be a liberal when you're safe in your mom's basement," the billboard's copy said. "But don't you want someone who's not afraid to take on the special interests that have rigged our political system? Donald Trump." The company released a statement last week saying that it was also planning billboards to be put up in Milwaukee, Cleveland and Philadelphia, among other cities. ABC News has reached out to the Trump campaign for comment.'You do things on your ca3bfb1094

Merkel cell carcinoma (MCC) is a rare and aggressive neuroendocrine skin cancer with limited therapeutic options. Checkpoint inhibitors targeting the programmed death 1 pathway have demonstrated benefit in various malignancies, but responses to these agents in MCC remain unknown. We report the case of a patient with relapsed, heavily pretreated MCC who experienced a durable response to single-agent avelumab. A 79-year-old man with an 8.6-year history of MCC who had previously been treated with radiotherapy, palliative chemotherapy, and pembrolizumab as well as platinum and taxane-based regimens experienced a complete clinical response after 8 cycles of avelumab. The patient then received an additional 28 cycles of avelumab and remained disease-free. In this heavily pretreated patient, avelumab provided durable antitumor activity without limiting toxicities. These data suggest that avelumab may be active in M
