A total of 49,718 patients underwent epidural anesthesia for operations under general anesthesia. The total incidence of anesthesia mortality was 0.17%. The incidence of anesthesia mortality in patients with the following risk factors was significantly higher than that in patients without these risk factors: ASA class 2, 3; history of cardiovascular or cerebrovascular disease; emergency operation; age, 50-59 years; and epidural anesthesia for more than 2 hours. Among these factors, epidural anesthesia for more than 2 hours was a most important risk factor. Especially, epidural anesthesia for more than 4 hours was an independent risk factor of anesthesia mortality.Q: How to properly transfer information between two processes in the same process group I'm using c++/win32. I have to transfer an int array from one process to another process in the same process group. How do I do it? A: From the docs: If you want to transfer an array of size n between two process in the same process group, use the interprocess_transfer API. If you want to transfer an array of size n between two processes in two different process groups, use the interprocess_exchange API. See the Interprocess::transfer and Interprocess::exchange functions for more details. Since its inception in 1985, the National Science Foundation's (NSF) Expeditions Program has been a leader in developing long-term, multi-disciplinary research projects in earth and ocean sciences. Now, an ambitious new research initiative is calling for innovative, hands-on, NASA-style teams to create the first "ocean observing systems" in the world's oceans. In a request for proposal (RFP) posted on June 28, the NSF says it will award multi-million dollar grants to teams of eight to 10 students, faculty, or graduate ca3bfb1094

A capillary zone electrophoresis method was developed for therapeutic drug monitoring of cotrimoxazole and its active metabolite, sulphamethoxazole in plasma. Cotrimoxazole (150 mg) was given orally in two equal doses at 8.00 a.m. and 6.00 p.m. Plasma samples were collected at 8.00 a.m. and 6.00 p.m. on the following day, to compare peak concentrations of sulphamethoxazole and cotrimoxazole. The plasma concentrations of cotrimoxazole (median: 2.17 microg ml-1) and sulphamethoxazole (median: 1.64 microg ml-1) were statistically significantly higher (P
