Please support our efforts to keep the forums open and growing.The specific objective of this proposal is to elucidate the molecular basis of a large family of bacterial genes called phage lambda, and understand the role of these genes in the biology of E. coli. We will test a collection of

possible models for phage gene control by measuring the rates of synthesis of specified proteins and mRNAs in vivo. We will also measure the rate of degradation of each mRNA molecule in vivo and in vitro. Our strategy is to use rapid, quantitative in vivo measurements of quantities of RNA and protein during lambda infection of a wild type strain of E. coli in which the genes for these rates are all present
