TESTING

Hello Everyone. Thank you for all your support and feedback on monster legends. We are testing version 1.2 on the closed beta. The majority of feedback that we have been asking for will be coming the in next patch, but thought we would have a round of bug testing now! Bugs that have been addressed are: 1. Monster collision should be better. (Should be able to see more monsters sometimes in inventory) 2.Items that cannot be looted sometimes now take up a portion of inventory. 3.AI has been tuned slightly. 4.Bug fix on tile and item use. Should this be present in next few patches, we will let you know. 5.First person view for monsters (When moving next to certain monsters) 6.Item-looting bug for death spell. Now working.

This patch is live on multiple platforms:  
Uplay: > Steam:> PS Store:

## **What's new in Elden Ring:**

**I keep trying for about 5 minutes but it tells me its erasing something else. Does the Toshiba Jetforce 8000 GL700 have a recovery partition? Is there a way to get back in without recourmantalizer or alternative recovery tools? Yep. And it said you had 201 blocks and made your apps.space on the disc. But it turns out you just need to remove 201 blocks and everything will be back in place. You won't need to retrieve anything. You can repair some other things, but not apps.space and games.space. For those of you who dont know how to do this, X:\Documents and Settings\username\AppData\Roaming\Temp. Repair. It will ask you if you want to save all your apps and games to the cloud, which you are told not to do. So your device will be a bit unweildy for a bit, but you can always retrieve some things. What you need to do first, is format your drive to a different partition type. Partition 2 - win 8 Partition 1 - ntfs or fat32 or exfat or something else So now you can go: X:\Documents and Settings\username\AppData\Local\Temp. Repair. Just do a restore. Yes all your apps and data will be downloaded from the cloud. I was supriised how long it was taking. But thats fine. I ran the restoration as admin and it worked without rebooting. Both had Win 8 installed, one with 4.5, the other with 4.10. Both were 2016 updates. Both came up. XP recovery partitions aren't really needed. Win 8 and Win 10 (and Win 8.1 maybe) on the other hand require them. This seems to be mostly a legacy feature. The earlier Win 7 required a Recovery partition that was then removed in Windows 8. So most no longer have one. You are probably supposed to have the 32kb partition on the C drive, not the E drive. Windows will default to it for Win 8. At the top where you can click on more, you should have the option for a recovery partition there. But in this case, it is just a formatting utility, not a full repair utility. It will format to the location you choose. Check the bottom left corner, where it says that it found**
