(Maybe I should ask for the title, but I have no idea what to ask in the body of the question.) The modular group $G_\mathbb Q$ acts on $\mathbb A_\mathbb Q^\ast$ by the units $U(k)$. And the subgroup $U(1)$ has order 2, which is normal (at least in the group ring $\mathbb Q[U(1)]$, in which we are basically reading the group ring as $\mathbb Q[G_\mathbb Q]$). Now, we form the projective limit $G_\mathbb Q = \varinjlim U(k)$ (where the limit is over all positive integers k). The action of the modular group, now taken on this projective limit, is well-defined. The group $U(1)$ is the only nontrivial subgroup of $G_\mathbb Q$, and so this action sends the subgroup $U(1)$ onto itself. Anyhow, I want a representation of this action on a set (which we will denote Rep). So I can form the projective limit $\mathrm{Rep} = \varprojlim \math
