_ **STEP 1: Open the image.**_ Open the PNG logo file (_circlesphotoshop.jpg_) you downloaded to your computer and save it to your hard drive as _circlesphotoshop.psd_ as a Photoshop document or load it from your file system. You want to get an exact copy of the image to work with (see Figure 2-8). **Figure 2-8** Open the image in Photoshop. _ **NOTE** _ _Overlays do not modify the original files on your hard drive. If you copy the image from your hard drive or an online site to your hard drive, the original files will be unchanged. With most file storage applications, you can drag the image files to a specific location (i.e., desktop, My Pictures folder) and save them, retaining the original. You should do this if you plan to save a layered image as a Photoshop file. Be careful not to save the file as an AI, PSD, PNG, or JPEG. There are differences that will be discussed later. You can see the preview of the file or image in the Layers panel. SeeFigure 2-9. When you open an image, the folder icon in the lower-left corner gives a good visual on the overall layout of the file. **Figure 2-9** The Layers panel for the layered image. * _**Caution:**_ Photoshop cannot restore your files if your computer crashes. You may lose all of your files if you modify an image without exporting it to another format, such as JPG or TIF. * _**Windows:**_ If you have not yet installed Adobe Photoshop, the _Adobe Photoshop Creative Suite 5: Application Guide_ (a free download from Adobe.com) will help you get started with the program. Download the application guide to your desktop and open Photoshop CS5. Click the "Step 1: Open a file" button in the upper-right corner of the window, select _circlesphotoshop.jpg_ from your desktop, and click Open. If Photoshop CS5 is installed on your computer already, you will see the "Open File" button in the "File" menu from the menu bar. _**Mac:**_ If you already have Photoshop installed, you can simply drag the _circlesphotoshop.jpg_ file from your desktop to the Applications folder (in Mac OS

Q: When you should use an ID vs. an indexer What are the situations where you'd use ID vs. Indexer? Indexer is an implicit member of struct, while ID is an explicit one. So when should you use one over the other and what are the differences? A: Indexers are useful when you want to use a member in a loop, but cannot use a struct as a for. Loop: for(int i = 0; i Name + " " + Id; public void ChangeName(int index) { Name = Id + "1"; } public void PrintList() { Console.WriteLine("Id: " + Id); Console.WriteLine("Name: " + Name); Console.WriteLine("FullName: " + FullName); Console.WriteLine(); } public void Insert() {
