Whilst the Czech Republic isn't the easiest country to visit, when you get the chance to drop in you won't be disappointed - it's a really pleasant country that's surrounded by cheaper and better places. The Czech Republic drinks scene is well-balanced and good value, making it a good place to base yourself. Click here to see a full list of Czech Republic venues by city. Q: The identity (τ) and the inversion (σ) in S_n I know the identity (τ) is a trivial permutation and the inversion (σ) is defined as an element of S_n such that it swaps two elements. So, how do we prove that the identity is the only nontrivial permutation of S_n that satisfies $(\tau) \circ \sigma = \sigma \circ \tau$? I know the inverse function of any element of S_n is unique in S_n ; how about (σ) ? Thanks for your help! A: Hint: Every nontrivial element of S_n can be written as a product of disjoint

cycles of the same lengths. We wish to show that such products can only contain one of the things you call the identity and the inversion. First prove that permutations that contain both the identity and the inversion cannot also contain an inverse cycle. Can you now use that and induction to solve the problem?
