An indispensable addition to the series of successful standalone Command Ops 2: Elite Edition, this expansion fully brings the Command Ops 2 universe to a new level in single player and multiplayer gaming. This new game mode features new challenging missions and can be played either as single player or as multiplayer. This fourth expansion pack for Command Ops 2: Elite Edition includes new and varied missions, in addition to a plethora of new vehicles, weapons, equipment, decorations and more! The Cauldron offers both new missions and content, and also fixes several issues. Issues Fixed: · Fixed a number of loading screen and interface issues. · Fixed an issue with the Russian language interface. · The achievements are now saved per campaign not just per game as we changed the file format. Main Game Changes: · Added new decorations: the Victory and Armed Forces. · Added brand new vehicles: the Scimitar Mk.3 and the Brummbär 4-wheeler. · Added many new achievements and trophies. · A new Upgrade Menu has been added. · The Cauldron Menu has been completely revamped. · Art and graphics have been enhanced. For more information, visit the official website.Q: Mysql error (1064) with checking for uniqueness I am trying to figure out how to count the number of rows that have a particular value for a particular field and then also want to check if the value is unique or if it's duplicated. The first part works, but I am confused about how to check for duplicates. As of now, this is what I have: SELECT * FROM records WHERE rec_id = "'.$_GET['id'].'" AND some_field = "'.$_GET['field_id'].'" LIMIT 1 Because there are other fields, the WHERE clause has also been added. LIMIT 1 works because it only gets the first record. But I am confused about how to check for duplicates. A: This will check if that field is unique or not: SELECT * FROM records WHERE rec_id = "'.$_GET['id'].'" AND some_field = "'.$_GET['field_id'].'" GROUP BY some
