tough training regimen? The actual realities of playing volleyball in the pro's world? With Actual Volleyball, you can find all that out for yourself! Actual Volleyball was initially funded through kickstarter. It originally cost \$80. After the campaign (just like other failed Kickstarter campaigns you've heard of), the developers only recouped about \$40 of that \$80. After multiple delays, the developers finally launched the game. Currently, the price of the game is \$20, but it can be downloaded for \$10. You can even download the game for free if you download the demo. We do not have any relationship with the developers other than being fans of this game and rooting for them during their Kickstarter campaign. Actual Volleyball is available for Android, iOS, and Windows Phone devices. A version for Kindle devices is

also available. What is Actual Volleyball? Actual Volleyball is a very realistic, volleyball-only simulation game. The game uses the IOS and Android APIs. You play on a team and progress through the career of a volleyball player. Yes, you play real-time volleyball. No, you do not have to go to a gym to exercise. In Actual Volleyball, you play on a 24-game season, like a real-life real volleyball. You can compete in 3v3, 2v2, and 1v1 (local play) as well as 2v2 (team play) and 3v3 (team play) against other real people. You can play 3v3, 2v2, or 1v1 "filler" games to train for a tournament. Best of all, we think you'll love actual volleyball gameplay. The controls are very easy to

cani90r0.0Reduction of exercise systolic blood pressure by aliskiren (HCT 3008) and enalapril in hypertensive patients. Aliskiren is a potent new direct renin inhibitor which reduces blood pressure (BP) with a minimal influence on plasma renin activity. It is not known whether aliskiren's antihypertensive effect is attributable to its blood pressure (BP)-lowering effect alone or whether other mechanisms are involved. The aim was to assess the comparative effects of aliskiren and enalapril on exercise BP during a controlled cross-over trial. A total of 30 hypertensive patients (21 men, 9 women) aged between 20 and 70 years were treated during a six-week period with aliskiren 300 mg/day (n = 15) or enalapril 10 mg/day (n = 15), while receiving adequate therapy for their hypertension. Efficacy was assessed in terms of the fall in exercise systolic BP measured 30-45 min after exercise (at 350 W). Aliskiren compared with enalapril significantly reduced the post-exercise systolic BP (P < 0.01). Following aliskiren, exercise systolic BP fell by 29.8 +/- 9.4 mmHg and following enalapril by 27.4 +/- 11.3 mmHg (NS). Aliskiren was well tolerated and no patient

complained of dizziness. The efficacy and tolerability of aliskiren suggest a potential role for this new agent in the management of essential hypertension. However, further studies are needed to assess whether aliskiren may be useful in the long-term treatment of hypertension. This invention relates to a fire-resistant shock-absorbing article, and more particularly to a tubular article comprising a
