The list consists of the edges of a graph. The edges start at node 1, and are then appended to the array. I have the edges[1] and the edges[2] positioned accordingly (both start at node 1), however the code in the for loop is out-of-context. Below is an example of the data that I have read from a file, and the code I've written to append it. Each line in the file looks like so, with the number of nodes and edges in the line: 1 4 2 3 3 2 4 0 # append each list to this array graph_all = [] with open("graph.txt", "r") as the_file: data = [] for line in the_file: data.append(line.split()) # for each line (containing two edges) for i in range(2): graph_all.append(data[i+2]) # print(graph_all) A: If you want to convert your list of edge lists to a NumPy array, use np.fromiter: graph_all = np.fromiter([edge.split() for edge in data], dtype=float) The Best Autumn Collection of 2014 This year's Autumn Fashion Week was filled with a particular air of anticipation. I remember when the summer of 2013 was upon us – the temperatures never quite getting warm enough to be a true Autumnal season. But that's all changed now, even 1cdb36666d
