A: I would like to share a quick and easy command-line tool to convert C source files to a c header file and the c source files to a c header file. The bin2h header files can be used as source files. Example: To convert a C source file to a.h header file named test.h and a C source file into a.c file named test.c bin2h test.c test.h We have tested with these available options: -a --no-headers -h --include-file= -o --output-file= -s --strip-comments= -c --compile -d --debug We have also tested, the tool supports exe or dll file as argument. You can visit the program website for more details about how to use the tool to convert different format of files. The tool is under C source code, so please feel free to change the source code. You can also edit the source code to change arguments or fix bugs. You can download the tool from this link: You can also download the tool from its own website. Thank you.
