Escaro Description: - 600+ event types included (more coming soon) - Multiple calendars. - Multilingual (Localization work ongoing) - Export calendars to your other calendars - Calendar sharing - Full Controlon measuring results, and in this way achievement of a high degree of precision and accuracy of, in particular, the measurement of fill level is possible. The method of the fifth aspect of the present invention is an advantageous refinement of the fourth aspect of the present invention. The method of the fifth aspect of the present invention has the advantage that, even when the value of a measured variable xe2x80x9cxcex9cxe2x80x9d is relatively small, with a relatively great precision of measurement it is possible to obtain a measuring result which is independent of the location of the probe in relation to the surface of the measurement object. In principle, the interaction between the probe and the measurement object can be detected by detecting the interaction of the magnet with the magnetic field sensor, the measurement object comprising, for example, a ferromagnetic material. According to a particularly advantageous embodiment of the method of the fifth aspect of the present invention, the value of the measured variable xe2x80x9cxcex9cxe2x80x9d is determined from the measured value of the absolute value of the demagnetizing field in the region of the probe which was caused by the magnetic field emitted by the magnetic field sensor. For example, xe2x80x9cMxe2x80x9d in the above formula (2) is determined from the measured value
