What IsFrom global warming to global politics, environmental science is emerging as a key element in the discussion on the future of the Earth. At the same time, what used to be the exclusive domain of experts is becoming a new genre in the realm of cinema. The Guardian is the latest in a long line of media outlets to be targeted in a series of email scams in which the sender appears to be from NASA. The email, which is essentially a phishing scheme, claims to be from the US space agency and asks recipients to enter their log-in credentials for a NASA website. "It looks like an official NASA email from @NASA," the email says. "We have discovered a security breach and need to reset your password and access to @NASA.com." "Using this method, we are able to reset your NASA accounts to protect your information. Please click this link to change your NASA password." The message also contains a link directing users to a website where they are asked to enter their email address and the reset password request is sent. Once the email recipient enters their username and password, and clicks a "continue" button, an error message shows up that says the user's log-in details have been changed and any cached data from a previous log-in will not be reset. "This is a phishing attack." the message says. "A fake web site has requested your username and password and we are unable to save it." One of the email recipients, a staff writer at The Guardian, reported the incident on Twitter. "Never got it, either," he said. "This isn't the first time I've had phishing emails. "Who would think NASA would have an email address?" The Guardian's email was sent through two servers, which had to be manually configured by a security engineer, according to Monika Mathur, a security researcher at the Guardian. The security expert tested a bunch of NASA emails from different addresses and found that every address has three email addresses: nasa.gov, nasa.gov and mail.NASA.gov. He also checked the Science@NASA website that is linked from the email received by The Guardian and found that

(Representational Image) Global carbon emissions are down. (Representational Image) A week before the British Parliament votes on whether to leave the European Union, the latest UN data suggests Europe as a whole is, for the first time in decades, reducing its carbon emissions. The world's total carbon emissions hit an estimated record high last year, and the EU has been in the lead to pull itself away from this deadly path, the UN said in its annual Emissions Gap report published on Monday. In its report, the UN said: "The 2019 level of global net greenhouse gas (GHG) emissions was CO2 equivalent (CO2e) 2.1 billion tonnes higher than in 1990."In a separate statement, the European Commission said: "On average, EU-28's emissions were 1.3 percent lower in 2019 compared with 1990."This was the first time that Europe, including its 10 largest emitters — the EU-28 plus Britain, Finland, Sweden, Norway, Ireland, Austria, Germany, Poland, Hungary and the Czech Republic — has been reducing its emissions. Emissions in the EU-28 as a whole have gone down in every year since 1990. The EU-28's emission in 2019 was 4 per cent lower than in 1990. The new report, however, said the world was not doing enough to lower greenhouse gas emissions, and called for ending the era of fossil fuels, to achieve "net-zero emissions" in the long run. "We have a window to limit global warming to 1.5 degrees Celsius, but we need to urgently expand the scale of ambition on the world stage to ensure this remains possible," said Erik Solheim, head of UN Environment.Read | UN report: Carbon emissions critical to meeting Paris Agreement goal by 2030 According to the report, the EU-28 net GHG emissions were an estimated 8.2 billion tonnes of CO2e in 1990, 4.9 billion tonnes in 2017 and 4.3 billion tonnes in 2019. The report quoted estimates that European emissions will shrink 2.5 per cent by 2020 and 3 per cent by 2030,

but add that "This is still too slow and insufficient to keep the global warming below the 1.5°C temperature goal.
