Cracked AccountsQ: How to access
Caliburn.Micro ViewLocator from
ViewModel? I have the following
issue: I have a application with
main window displaying various
views. I would like to access
ViewLocator from my ViewModel. I
do have a custom IViewLocator

class (Caliburn's `IViewLocator`: here) and I want to be able to pass it to my `ViewModel` for `MainViewModel.CurrentView` to allow it to access view's resources (content, templates, etc.). The following code I found in a `ReactiveUI` example, however, produces an error: `Cross-thread operation not valid: Control 'MainViewModel' accessed from a thread other than the thread it was created on.` `MainViewModel` code:

```
public class MainViewModel :  
    ReactiveObject, IViewAware,  
        IViewLocator { public  
    MainViewModel(IViewLocator  
viewLocator) { Message = viewLoc  
ator.ViewLocator.GetViewFor() } }
```

(Although, in fact, I need the IViewLocator to be typecasted to a type that I can pass to ViewModel, e.g. an IViewLocator, as the code above is displaying, so I only need to pass the type to ViewLocator from which MainViewModel will be

able to get the default property for typecasting.) The code above that's causing the error is the following line: Message = viewLocator.ViewLocator.GetViewFor() ViewLocator: 0cc13bf012

Abstract. The major goal of this work is to generate all-in-one music and file compilation software.
