Thyroid metastases are being detected with increasing frequency because of the widespread use of diagnostic imaging in clinical practice and the early use of fine needle aspiration cytology. The most common sites of metastatic tumours are the breast, lung, kidney and stomach. Other less common sites include the ovary, lung, central nervous system, urogenital tract and lymph nodes. Thyroid metastases can be classified as the focal or diffuse type. About one-third of thyroid metastases are considered to be the diffuse form. The focal form occurs in about one-third of cases and accounts for the majority of the morbidity in patients with thyroid carcinoma. There is an increased incidence of thyroid metastases at the time of diagnosis of a primary tumour. Metastases may present years after the primary tumour has been diagnosed. The clinical and surgical management of thyroid metastases is dependent on the type of primary tumour. How to Enable Turn Tracking in Google Maps If you have access to the Google Maps app on your phone or tablet, you can now turn on the turn tracking feature to see your route. This feature gives you the option to watch others or yourself navigate to and from your destination. If you want to see the routes other people take, simply search for the place you want to visit. Press and hold the play button for a few seconds to activate turn tracking. On older phones or slower speed phones you may need to use two fingers. You will see a spinning red ball appear around the route you are traveling. The more people that have enabled the feature, the more information you will get about your route.
