The German Infantry Pack is a standalone DLC for the Hearts of Iron III expansion pack. It comes with a variety of new units, battle outfits and many quality of life improvements. ============ The Heer comes from the ancient land of the Teutons. Germanic tribes had settled in the region for centuries, and it has been a part of Germany for the last century. The people of Germany, proud of their rich tradition, were the first to declare independence from the Prussians, and became the German Empire. However, this hardly solved the problem of the region's changing demographics. In the 1900s, Germany was hit by two world wars, only to emerge as one of the first superpowers. Germany then reorganized into several smaller states, and after many years of political turmoil and revolution, the country became a confederation of states with Prussia retaining its dominant position. ============ Key features of the German Infantry Pack: - New battle outfits for all German infantry units. - New uniforms for all German units except Cossack - New camouflage patterns for the new uniforms - Highly improved quality of life features: - You can now easily identify German units by their rank, and easily find the nearby German units during the game - You now have the ability to change the appearance of your personal vehicleQ: Select Data In New Line In Org Mode I want to select data from a new line in org mode and copy. Here is the problem for me. How to find the beginning of the second line? I did multiple pressing Enter, but seems it's not very flexible, considering if I need to change the first line later. A: You can do it with C-c C-s to the text from the current line and C-y to yank it in the current buffer It might be good idea to take a look at "Key Binders" to see which keys are binded to the actions you use frequently. What is Trainz 2019 DLC: DBuz 747 Passenger Cars

Description

The DBU Aviation Carrier 747 has long been a desired aircraft since it first introduced in 1979, and it's popularity hasn't diminished. Its long-range capacities, it's incredibly spacious passenger seating, and it's the best in terms of fuel economy make the Boeing 747 one of the most sought after 'long-distance' long-haul aircraft in the world. With its unique 747 aircraft style it looks good enough that it's a suitable airliner if only you wanted to look that instead of it being a manufacturer of auxiliary transport...

The aircraft in your roster now gets the second Boeing 747 that can be operated by means of DBU (Dialog Box Unit) for players without DLC. The new aircraft is the 747 JRC-UP70 version with extended fuselage (5m), longer engine and more powerful wing. Brand new shell and new cockpit with advanced cockpits design make the passenger experience more accurate.

If you wish to add the DBU, you have to get a DBU freighting unit, for which I propose two DLCs with new freighting units as options:

- Buxair 747, Boeing 747JRC-UP70 and Boeing 747SP
- Optionally, finish to the full version

Controls

Another step forward for our controls; a dry run allows you to familiarize yourself with the controls. In standard section there is a section for overview and controls with its own magnifier, here you can see typical components and functions.

For aircraft with DBU there is also a DBU section for aircraft controls for exactly this purpose.
