Plans and the Skills of our Future Workers In the good old days, people were trained for a specific role and a single employer. That's all changed now, and with it our future workers will need to have the skills for multiple roles and multiple employers. So, how do you create a future workforce that's ready for change? 1. Everyone should be able to re-skill and retrain. In the past, when you joined a new company, you'd need to start from scratch on your skills. That's not the case any more. The way we build up skills is changing. We have an emerging skillset called Professional Workforce, which is created by companies and the public sector. We have to know how to work with these skills. 2. A future workforce should also have some freedom in how they spend their time and who they work with. In the past, people have focused their energy on a single employer. But our need to work flexibly is a new feature. We need our future workforce to be flexible and take on more than one role, all within their company or career. 3. The skill set that our future workforce requires will be different from the past. In the past, if we wanted to work with building construction, we'd learn plumbing and electrical. But if we want to work in a hospital, we'd learn medicine. We're not just looking at vocational training now – we're looking at how our workers will know how to learn, how they'll work flexibly and how they can collaborate. 4. We'll all need to be business and problem-solving savvy. In the past, everyone just had one employer and one job title. But we're moving to a more diverse workplace, where your work is often not just about your job title or profession. So, we'll all need to be more business and problem-solving savvy. That means we have to be able to work flexibly, and make decisions, and take risks. 5. We have to work in a learning economy. The old world of workforce development was when
