Watch MAYURI full movie online streaming at fmovies. com.Q: How to find coordinates of shape in shapefile after snapping to a certain point or geometry in QGIS? I'm trying to snap a layer to the every shape that has a certain feature in QGIS 2.18. For example, I want to be able to snap the point in red to the blue square on the picture. Is there a way to do it? A: SketchTools from Processing Toolbox is a great plugin for doing this. Open your attribute table and, using the SketchTools plugin, click on Sketch Features. As you already have your layer, select the one you want to snap to. On the plugin window, change the value of the property "Show Target" on the bottom of the window. You can either snap to the centroid or center of your geometry. If you choose centroid, you'll get the projection of your geometry. You can then save your sketch with the "Save As..." button on the top. {4FC737F1-C7A5-4376-A066-2A32D752A2FF} cpp;c;cc;cx;def;odl;idl;hpj;bat;asm;asmx {93995380-89BD-4b04-88EB-625FBE52EBF8} h;hpp;hxx;hm;inl;inc;xsd
