On the website of ActiveMQ, I read that it is heavily used in the finance market, a market that is increasingly demanding scalability to cope with very high data volumes. I wonder if this is of practical relevance to other IT organizations and if ActiveMQ is truly a game changer. A: Well, ActiveMQ is written in Java, so it is a contender for huge memory footprint. Of course, the other tools written in Java - ActiveMQ, JMS-Stomp, JMS-Durable, JMS-Colored - have relatively small memory footprints and there's probably something equivalent to any of them in your OS/kernel. Another important point: you mention CPU intensive work; since ActiveMQ is a JMS based project, you need JMS client libraries (as native code, generally). If that's small footprint it is probably not worth the extra cost. You can use a broker like ActiveMQ, but it's not exactly a standalone solution. The 10 Types of Promotional Items to Give Your Brand Share Although the first week of January can be a bit confusing when it comes to giving out promotional items, there are a few official promotional items that always come out of the big one (8th January - 14th January). However, if you are looking for tips on what to give out to your audiences this holiday season, then read on as we take a look at the ten types of promotional items you should be thinking about. There are a lot of different types of promotional items but don't worry, as they fall into one of these categories. Why You Should Choose a Promotional Item for Your Brand Businesses use promotional items to show the world that they are looking for new clients and that they are known for their quality. When you give out promotional items you can be assured that the people who received them will know you and what you do. Furthermore, when you give out promotional items, you can ensure you are staying top of mind with your customers, clients, and even the general public. To

How to download & install Windows 8.1 Update The latest version of Windows doesn't even get a new version number, but it has some key tweaks that should be. Craniofacial imaging and surgical navigation in the management of craniosynostosis: what's new? Surgical correction of the metopic craniosynostosis may lead to a unique set of challenges. Both distraction and fronto-orbital advancement techniques require precise targeting of the sagittal suture. The timing of surgery, including the relationship of the brain to the surgical repair, is not always readily apparent on preoperative imaging, especially before and in the early postoperative period. Improved patient imaging, including imaging with computed tomography and cranial/facial computed tomography scan, and improved surgical instrumentation in the form of the pediatric endoscopic microscope have improved the ability to achieve a superior surgical result. To date, the use of navigation in the management of craniosynostosis has been limited to the use of fiducial markers and bony landmarks on the skull. A software application such as StealthStation Navigator (Medtronic, Minneapolis, MN) or BrainVentr (Medtronic, Minneapolis, MN) can be combined with the neuroimaging to view the surgical repair in 3 dimensions and link it to the surgeon's probe on a virtual skull model. This technique has been shown to improve craniofacial imaging and aid in surgical navigation when applied to the management of craniosynostosis. // Licensed to the .NET Foundation under one or more agreements. // The .NET Foundation licenses this file to you under the MIT license. // See the LICENSE file in the project root for more information. using System; internal static partial class Interop { internal static partial class ComCtl32 { public enum COLORMAPTYPE { COLORMAPWIN16 = 16, COLORMAPWIN32 = 32 } } } Anaemia in pregnancy: Effects and implications on fetal survival.
