What are some worthwhile mods? - Total War: Attila (Official).Q: Adding a class to a child element when using a buttonpress I am using a simple forms view for a view that i am building to display a list of items. One of the fields from the view is a button type that i would like to style differently than the normal button. When i try to add a class to the button it displays in the view, but i am not sure if its adding it or not. This is my code so far: Tournament 6d1f23a050
