## **D16 Group Total Bundle VSTi.VST X86 X64 709 ((LINK))**

the bontan bundle of synths is a great price point but lets face it, it doesnt include anything from the hugely popular enigma range of synths. however, for just under \$60, you get a little over 30 sounds. in terms of versatility, the bundles plugins are compatible with all major daw's, and the included sounds are emulated on a number of analogue and digital equipment - so there are loads of great options from vintage to modern. the default settings are very good, although the more flexible plugin settings are a little obscure and will take a little playing around with to find the settings youre after. our favourite in the top three is fsx strings. this is truly an all-encompassing sampling instrument bundle with an incredible range of instruments, from the best to the most obscure. there is something to suit every style. from guitar to string ensembles, brass to string orchestrations, avant garde abstracts to spectacular percussion creations there is something for everyone. the price point is a little high compared to the rest on the list, but at almost 30 total instruments you get a lot of value for your money. and as with all the bundles on this list, the possibilities are endless with fsx strings. digital performer has had a real renaissance in 2016, and this bundle is no exception. you start with the synth-stomping nature of the kontakt 4 library, and the plugin is delivered in a compact and uncompromising format ideal for a deep study of the core functionality. each section then contains a range of samples from the 2nd life library (drum kits, original soundscapes, guitars, basses, kick drums, vocal loops, etc.) to fine tune the sounds in your daw to suit your needs.

## **D16 Group Total Bundle VSTi.VST X86 X64 709**

uvi are one of the leading companies producing emulation plug-ins for the hi-end market. and with a range of virtual analog models and their true to hardware line-up, a

---

resurgence of interest in instrument emulations is understandable. v01 | z4a a617 modeler is a very recent addition to the uvi family, and like uvi is one of the very best z4mas on the market. its true to the sonic qualities of the classic buchla 500 modeler, a model heres considered to be one of the very best oscillator designs ever built. uvi appear to have taken the concept of a bundle of plugin emulations of classic synths to its logical conclusion, in terms of the sheer range and quantity of the synth modules and supplied presets. vintage vault 3 also comes in at a very attractive price point, significantly lower than combined cost of buying the instruments individually. fortunately, any concerns that there might be a catch in terms of quality can be put aside: these plugins sound great. from some really rare and obscure machines to genuine classics, youre spoiled for choice. even if you dont go far beyond the supplied presets, theres enough

---

material ad variety here to keep you exploring for a long time. one of the most important aspects of analogue synths is the warmth of their sound, achieved by the warmth of their oscillators and modules. this feature is present in uvi z4a modelers oscillators and modules. the approach to the sounds is quite different: z4ma modeler 500 melodic, thick and powerful. circular ease is a must-have plugin for any vst mastering suite! there are two main functions of an equalizer. the first is to extract certain frequencies from a signal. in an audio mastering suite, equalization is used to boost specific frequencies and eq parameters are used to achieve certain sound characteristics such as clarity, power, punch, brightness, definition and smoothness. circular ease is the best solution for frequency extraction. 5ec8ef588b
