Resonant Frequency, Viscoelastic and dissipative part of the force curve measured, are automatically computed. Probe (sample) stiffness, Young's modulus, Friction, Dissipation force and Energy dissipation are automatically computed. For more information about the software, click here. force (F) and Energy Dissipation (E) were obtained by calculating from the original x-position and the derivative of the cantilever position from the second oscillation. To get a cumulative energy dissipation trace, keep jumping the F file, until you get an Energy trace. To get dissipation from the start of the trace, by recording the position from the start of the trace. View software and tutorial. This software is free for non-commercial use.
