Crack cocaine's lower price, ease of production, and manner of distribution (small quantities sold to individuals for personal use) made it widely accessible in poor, urban communities, which included many Black communities. Although white people also used crack, police efforts to control crack focused mainly on urban Black communities, in part because it was easier; drug deals in those communities usually happened in public on the street, not in private residences as in white communities. They also happened more often, because, unlike people who have the money to stock up on their drug supply, lower-income people can afford only one dose at a time, and each drug deal carries a risk of arrest. The increase in arrests of Black people and the increase in sentences for crack meant that Black people went to prison for cocaine offenses far more often and much longer than white people, even though white people used cocaine (both powder and crack) more than Black people did. I have been told the -13 hardware is new, so I do not think the cause of the screen cracking would be related to the age of the laptop. I will run through my steps to replicate it. (The laptop is no longer with me to record the steps.) I did not, however, track my steps from the day prior or the day prior to that.
