Adobe's confusing and contradictory logic continues, with the release of Elements 21. On the one hand, we have more video functions than we've ever seen before. On the other hand, we have fewer features, due to exposing the basics to all Mac users as the cost to maintain two separate platforms.The new class-based Actions tool is the most interesting addition for creative professionals, but is inconsistent and useless. I've used several for the power of its features, and have found they sometimes don't even behave as advertised. Once again, it's not a great idea to use a new feature if you aren't 100% sure it will work on your specific media. It's reasonable to expect this kind of behavior from consumer software. In this particular case, Adobe is taking a good step by combining the separate cloud and desktop versions of Elements. Personally, I'm glad to have access to the comprehensive and powerful software in the cloud, but all of the desktop features in the desktop version are also gratuitously removed. It makes me wonder if Adobe is being more of a service provider than consumer software company. Sadly, the robust and feature-rich new "Create" menu now takes us back to a feature-poor menu. Elements 21 is about 50% slimmer than Elements 20, which is great, but the transition from the custom user interface to the new flat menu is jarring. The powerful and simple features are now buried in inconvenient locales. The single most important difference between this edition of Elements is the introduction of an Insanity subscription, which forces users into a bundled "monthly" plan. I have had great success with this method of digital media delivery in the past. I now realize I can't do that anymore. Not if I want to use the software and all of its integrated software drivers to my satisfaction.
