For new users, Elements introduces intuitive tools for creating graphics and web designs, as well as new organizational tools to help you keep track of assets and files. Use it in the same way you would with Adobe's Sketch app and it can render quite well for proofs.

Once you learn and use the Image > Adjust > Levels... **often**, you will start to rely on the Eyedropper tool. The Eyedropper tool is the most commonly used tool for adjusting Levels. Even though it is the most commonly used tool in Photoshop, yet from this learning curve, you will see that it will improve its place in your workflow. The next big feature in Photoshop is the ability to add adjustments (aka: color adjustments). These adjustments are mostly right above the channels palette. This palette allows you to add and use a ton of different adjustments such as Levels, Curves, Hue/Saturation, and More. These adjustments can be used to make your images look way more professional.
