Keymacro is an easy-to-use and intuitive program that enables you to activate a macro recording feature on your webcam. The program allows you to record actions on your computer, such as the act of scrolling, typing, opening a file, or any other action. You may also record the whole screen and even the entire application, making it easy to create complete scenarios. Keymacro allows you to set the action in any way you want. It can be a simple recording of the webcam, or you may choose to control the process of recording. The program saves the macro that you create and makes it available in the Library tab, so you may access it when needed. If you want to erase a macro, it is easy to do, by just selecting the item and pressing the button that appears in the program. You can also choose to create a manual record, which you can add to a list of recorded actions. Once the action is created, the program allows you to assign a name and start the action. The name of the action you choose will be saved to the Library, so you can access it as needed. The name of the macro can also be displayed in the toolbar, so you can quickly access it. Another unique feature of Keymacro is the ability to create templates. The templates are saved in a database, which is created when you first install the program. If you want to add a new template, you have to create one from scratch. The initial templates are based on all the most commonly used actions, which makes it easier to get started with the program. If you want to create new templates, you may do so by browsing the available ones. Keymacro is a convenient program that allows you to record the actions on your computer, making them available for later use. It is easy to use and also has several useful features to make recording your actions as easy as possible.
