Now, the Facial treatments and other flat colors can be included as a collection of layers. This is used for smooth color transitions between flat colors and textures. Additionally, the colour picker is now a live zoom-in for any parts of a palette. To save a colour as a custom hue, click the eyedropper to select a colour. Additionally, the CSS controls were revamped to make it easier to edit the style of any layer. The arrangement options for layers have also been updated to make it possible to rearrange which layers are on top in the Layers panel. Three brand new filters have been added that work in conjunction with the different adjustment layers. These filters include Motion Blur, Wrinkles, and Smudge. The Smudge filter is similar to the one that you find in Apple's Pixelmator, adding a bit of texture to certain objects. The Motion Blur filter was introduced in CS5 and is able to make a subject appear farther, more like in a cartoon. If you're like most Photoshop users, adjusting Picture Tools (relative to Signals, Adjustments, etc.) is a component of your workflow. If you want to make a batch of adjustments that you can apply to a large area of an image—or adjust multiple images or groups of images at once—then adjusting Picture Tools is one area where you can create a new set of settings that you can use again and again. Adobe experienced the optical rendering glitch in Camera Raw (see also Camera Raw - A Glitch and an FAQ), so they added a new “pin” feature and now you can easily see whether an image edited in Camera Raw is rendered correctly. They did that by adding the pin feature to the Edit > Effects > Crop panel, which now includes a pin feature to the Pin tab. Adobe has A LOT of ways to combine a list of images into a new, single image. The simplest way is simply to use the Drag and Drop that lets you select and drag images to a new image size. You can also resize, move, and rotate the images. Then, you can use the outline edges option and the Smart Objects options make an edited pixel layer that you can then drag and drop to another image to add that layer to the new image. Adobe is one of the creators of the formats used to create the images that the web displays around us. For example, anyone who has ever seen a web page that misinterprets the color display of an image is using a web-display format that is supported by most browsers but not Adobe's proprietary formats.
