WinSIM Pro X64

1. Set SendDongleMacro.h 2. Generate smart card command list according to readers/cards 3. Set SendDongleMacro.c 4. Generate read macros according to smart card readers 5. Set SendDongle.h 6. Generate smart card macros and build executable module 7. Set SendDongle.c 8. Generate APDU command list according to readers/cards 9. Set SendDongle.n.h 10. Generate APDU macros and build executable module 11. Set SendDongle.vbs 12. Generate script macros and build executable module 13. Load SendDongle_n.vbs script module 14. Set SendDongle.exe How to use the tool: Open SendDongle_n.vbs script module and use the "Send" button to create a send project. When you have saved the file with the name of SendDongle_n.vbs and opened it with Notepad, paste all the macros and fill the parameters in the parameters window. Save and close the file. The SendDongle.exe will be generated automatically. Double-click the executable file to launch it. Advantages: 1. Very easy to use, no need to install anything. 2. High compatibility with almost all the modern smart card readers. 3. Easy to handle the working time and will save your time and energy 4. Multiple card readers can be connected to the same PC 5. For various types of cards, you can select the card reader according to your needs. 6. Command List and Trace for each card reader can be selected according to your needs. 7. Efficient database function, so you don't need to write all the parameter lists manually. More Features: 1. Multiple cards can be supported simultaneously. 2. All information can be saved to the file database. 3. Paste the card ID when creating the Send project. 4. Trace any APDU command. 5. Pause between sending command when selecting the Send project. 6. Save project data as.h and.c. 7. Configure hot key to access different functions. 8. Filter command on the hot key to simplify the work. 9. Sort by project data and hot key to configure a hot key. 10.

What's New in the?

Hello All, ***** This is an update tool, update your GSM SIM from your PC. This tool is used for reading SIM card from GSM SIM and modify the information on the card, both for master SIM and the temporary copies. There is a field on the card which has all information you need to update like GSM AID, SIM AID, IMSI, Iccid, Pdu Message, Profile Name, Feature Name, Date of Last Update, Date of Next Update and Date of On-line Status. GSM SIM is the basic data to be displayed on the cell phone. The function is implemented by IMSI, which is a key for cell phone, AID is the unique code for SIM card, Pdu is the key for send the command, Profile is the profile that owns the AID, Feature is the feature like GSM, GSM-GPRS, GSM-EDGE etc. You can modify the information of the AID, IMSI, AID, IMSI, Date of last update, Date of next update and Date of on-line Status. The update is for information like GSM AID, SIM AID, IMSI, Iccid, Pdu Message, Profile Name, Feature Name, Date of last Update, Date of Next Update and Date of On-line Status, etc. The new SIM card can be update with the original card without original SIM card. Please backup all information on the SIM card first, because you will be modify the information of the original card. The software is download the SIM card information and open a file, so please connect a GSM SIM reader to your PC. The AID field is displayed on the program first, and you can select AID for update. If you update the original card, please deselect the AID. If you need to update the IMSI, profile name, feature name, you can click the Save icon on the toolbar to save the information. There are two button on the toolbar, One is "Update", the other is "Save". Click "Update" to update the SIM card information, Save the information to a separate file, then it can be restore in the program by click the "Save" button. Don't choose the update path in the Settings in the program. The list of content is too long, so I add some screenshots about the features of this software. Software Features: The AID of all GSM SIM can be seen on the program The AID, IMSI, AID, IMSI, Date of last update, Date of next update and Date of on-line Status can be updated The date of last update, date of next update and date of on-line status can be updated &#
