I have a confession to make in this review. I was quite hesitant to switch to iPad Pro as a primary device. While Apple's ecosystem is quite straightforward and user friendly and I am happy with the iPad and the Pencil, it never felt right to me. The iPad Pro just felt wrong. On the desktop I use a 24" monitor with a keyboard and mouse or a 27" version that supports external mice and a keyboard. Everything I can do from the desktop I can do from the laptop positioned in my bed. I feel no need for an iPad, as I transported most of my pictures and work documents on Dropbox. I've used the iPad Pro as a back up device while creating my reviews. I use it for general navigation and as a kind of screenshot tool, but it just doesn't feel right and I just can't make myself like it. I think that if there was a lightweight alternative, that worked as well as Microsoft's Surface Go, I'd absolutely buy one. There's definitely something I'm missing, and I am taking my time to figure it out. The iPad Pro is a very capable tool if you're willing to adapt to it. What the iPad Pro lacks in size, it makes up in versatility. The keyboard means that the iPad Pro becomes an all-in-one alternative to your laptop. Sure, you can position it like I do, and that's perfectly fine. I have a massive dependency on my massive behemoth of a ThinkPad laptop, and that's fine. However, you can also position it like I do and do a lot of other things. You can watch movies, play games, create documents and videos, all at the same time. Why should I still have two devices? Why can't I have one device instead? The iPad Pro is already saving the world .

How to use Adobe Photoshop

There are two important features to Photoshop that can cause you a lot of frustration if you are not aware of them. First, and most importantly, on the top toolbar is the ability to switch between editing mode, view mode, and preview mode. Most people start the editing process by switching to the editing mode. Since then they won't be able to see their edits. The other problem is that if you don't close your files after the process of editing is completed you are opened up to data corruption and more frustration. Be sure to close Photoshop in the File Browser, which is available by selecting Window > Workspace. You can also save your file in a different location, once you are done editing.

How to change the background color of your image

The background color in Photoshop can be changed by choosing the Color palette/Color panel. Click on the Background Color panel and choose a color to apply to the background. You can then choose different layers to apply color selection to. If you drag across colors in the Color palette/Color panel, the spot you click will be the color you are currently selecting. **How to correct images in**

Photoshop

For most beginner's, the first step to using Photoshop correctly is to take a screenshot. If the image has a black background, don't select that option. Open Photoshop and click on File > New to open the new file. Next, you'll need to select the "Background" and choose a color other than black. You will then select the text layer and choose a font other than the default. This text should be in white.
