EasyFlow CS2 for InDesign CS2 is the updated version of EasyFlow CS1 for InDesign CS1. EasyFlow CS2 for InDesign CS2 is a tool that helps you insert new pages and link text frames across master spreads. EasyFlow CS2 for InDesign CS2 also can create new frames and link text frames to the new frames across spreads if your document contains multi box text chains on your master pages. EasyFlow CS2 for InDesign CS2 is also a great tool for the creation of books, catalogs, directories, etc. It automatically links the text frames across master pages, inserts new pages for spreads, and automatically over sets text frames that are overset. It also comes with a new option to control the way in which multi box text chains are handled, but those new options are disabled by default. EasyFlow CS2 for InDesign CS2 lets you control how the text frames are handled when the multi box text chain is overset or overflows the master spread box. With the new 'Line Overflow' option in EasyFlow CS2 for InDesign CS2 you can define three different ways in which to handle the line overflow: - Option #1: Lines that overflow the master spread box are over set. - Option #2: Lines that overflow the master spread box are never over set. - Option #3: Lines that overflow the master spread box are over set, and are not wrapped. EasyFlow CS2 for InDesign CS2 also supports multi box text chains. You can define the layout of the boxes of multi box text chains on your master pages, and have those text boxes automatically linked across master spreads. And if your document contains overset text frames (overflowing text frames) EasyFlow CS2 for InDesign CS2 will automatically insert new pages, and link text frames across master spreads. The new 'Line Overflow' option in EasyFlow CS2 for InDesign CS2 lets you define how to handle the line overflow (option #1, #2, #3) when the text in the master spread box overflows. Manage and insert new pages for a multi-page text frame. Insert a new page if the spread box exceeds the boundaries of the text frame. EasyFlow can be enabled and disabled for individual documents, via the 'Auto Flow Master Text Frames' menu option. EasyFlow will only insert new pages and link master text frames - text frames that are present on master pages. For 'facing pages' documents, or spreads containing multiple pages, ensure that the text frames are linked across the master spread (i.e. across each page on the spread). When a master text frame is overset, EasyFlow will insert as many new pages are required until the text no longer overflows the box. EasyFlow will add a new menu option to the 'Layout' menu ('Auto Flow Master Text Frames')- use this menu to enable or disable EasyFlow's automatic insertion of pages. This preference, like most InDesign preferences, can be set with no document open (making it the default behaviour) or can be stored against individual documents. Q: Reset PUT password in sails.js app I have an app that uses sails.js and I'm trying to implement a reset password button that will send an email with a token and a link that links to a page that allows the user to reset the password. However, I'm running into a security issue. I don't want a user to be able to reset their own password, because they're already logged in. I was thinking I could have the reset password route route to a page where the user would log out and then sign in again using the new password, but I'm not sure if that would work. I would also need to make sure that the reset password link is set to expire after a certain amount of time. Any suggestions would be greatly appreciated. A: I found out that I can configure the authentication to use a JWT token. This token can be renewed when someone clicks the reset password link, and you can store the token in the user's session and verify it when resetting the password, preventing
