Of course my pet peeve about Adobe (and my own) is the huge number of developers with each new version whether it be a bug/fix release or a new application release. I have been following Adobe since the 2nd version of Photoshop and now that they have gone "Linux Only"(sad IDK when that was but I think around 2005???), I haven't even gone to any Apple store or any Apple Authorized store to buy the newest, greatest, and strongest release of Photoshop. I don't understand that. I am also a computer software engineer so I understand the development of software and the whole concept of Software Versioning, but what I don't understand is how it is that they have HUGE customer base is so many different places when they can't buy the software at that same hardware store, shopping center, or online reseller? Not all hardware stores are the same, and some on line software resellers carries software from various companies, so what? I bought my first computer from Target and that is when I run into the same issue over and over of a customer with a specific version of software that might have been a bug fix, or a new application update, etc. so sometimes they have the bug and sometimes they don't. I am not a computer genius, probably not even close to being one, but I don't understand. The Creative Cloud version of Adobe Stock has a free Public Domain option in its search bar. Its filters might not be all that you'd like, but they're still better than those in the free Stock app.

Photoshop makes effects simple to apply. In most cases, users simply click a tool to apply an effect, and then click the same tool again to remove the effect. Where you place on a layer controls the appearance of that layer on the photo and how much of that effect remains visible in the final version. The editing tools in Photoshop offer a lot of flexibility. There are six types of ellipses, for example, to help you shape your editing decisions. The Paint Bucket lets you erase slices of an image in any shape, including elliptical. The Pen tool makes drawing almost effortless, thanks to the support for pressure sensitivity. For photo editing, you could use the Clone Stamp tool to repaint the same areas of a photo several different times to create a complex, multipage look in a split second. The best way to get the most out of Photoshop is to stay familiar with the different tools. Fortunately, there's an online tutorial that walks you through basic Photo Editing 101, from importing the earliest digital photographs to slowing down the time between taking and editing your images in post-production. Another welcome addition to Photoshop is the ability to automatically save as a project. This new feature allows you to save a collection of images for later use or sharing. You can create a folder, add a prefix and then save your work as a collection. It's a great way to keep a project organized and create a library or group of images. Simply go to File > Save, and there you have it. (Note: this feature is still available in version CS6.) A masterful new feature allows you to work with any lens you have on your iPhone. Using the camera adapter included in the Photoshop app, you can snap a photo with the iPhone camera lens, and then crop, straighten and add artistic effects to the photo such as vignette and blur. Simply switch the adapter to the camera app you're using and follow the wizard that guides you through the steps. New corrections and enhancements have been made to the auto-correct tools, and you can now bring up an overlay view for any highlighted area, rotate and crop with pixel-level precision, and edit and merge multiple layers. Once an image is open, go to Image > Adjustments > Auto-Levels to quickly remove the red, green and blue component levels inside of Photoshop, which is a great trick if you're shooting in RAW mode. New Blur and Sharpen options are available in the B&W and Photo modes, plus you now have more control over the Final Cut Photoshop actions such as where on the stage the images hover and grow when you perform the action. In addition, you can now also use the cursor to add watermarks and blur backgrounds when you use Photoshop to retouch wedding photographs.
