Can't link you to any VOGon's Key server for that, just the general idea.. Also note that Keygen's wont work with easy-monitor. Also, other than that, I keep my stuff on my own drive and system so I'm secure from unfair keys. Always keep your drive off. Have fun. Another hacker's mistake I see all the time is, they aren't using the most secure version. I never pay for software.. I used to use this key generator a lot when I was up against more experienced people.. But some of the keys it makes the number of possible keys so many.. But it's convenient for when I'm sharing keys with others. For example, you can use CPUInfo64, which tells you the CPU speed and number of cores on your computer.. The more cores you have, the more speed you'll get and the more memory your computer will. You can use this to find a key that will generate a speed at least as fast as your current one. Another option is to use Coretemp. You can find these tools and more here.. Either the computer is slow or the key generator is good. . I remember finding this while trying to find someone's key generator. The easiest way to find out what type of key you need is to go to one of the links and find out what your current speed is.. Your speed is a number, so if your current speed is 100 and you need a key generating 100+, then your new key will be 100+ as well. . So think of it as a multiplier. So how do we use this? In most cases, you can use an Auto-Generator. Use this one for those times when you're at a library, campground, or at home. . There are other algorithms that don't work too well in programs like this. So don't use this if you want keys that work well in a program. With that being said, you can use the random generator for the most part. . With that being said, here are a few
