It is the best intro photoshop there is. But you can never become an expert in a couple of days. Actually, Photoshop is the most incredible program and it will leave you with a leg sore. The best photo designers recommend their programs. Maybe it is a bit deceptive promise. Pro's find way too hard to train to all their softwares. Elements is a good start, but Photoshop is so far ahead and Photoshop lacks the bells and whistles really unique to the software. Sigh. So many helpful features that you can't learn in a year or two. So much in the pro version and so little in the basic version. If you search for the missing pieces of the puzzle, you can be quickly overwhelmed. So choose carefully and you may miss out! Furthermore, I have not been able to locate a way to crop elements separately from the background. It is such a shame that what could be a two-step process should have to be a three-step affair. There is no simple way to remove just the bad guy. Any photo editing tools you use on a regular basis, it is also a great asset and a true benefit because it makes your work easier and more enjoyable. I recommend that you try it, and at the same time, I'll suggest that you use the Elements capabilities in the meantime. This is where it all starts. The Canon 1D X already had Canon's high-end autofocus

system, but that's not something I need on the Nikon D4 for wedding and portrait work. Along with that primary focus point is a series of 61 AF areas–16 in the center, 36 near the edges–all arranged in nine groups. This helps prevent overshoots and lets the camera make changes in AF mode without the need for a tripod. If you have to shift your subject off-center, the D4 will find it. We have been spoiled by good AF in recent cameras, and Nikon's latest model does not disappoint.
