Rival products like Adobe Lightroom for Design can give you something of a similar performance boost. Those looking for a basic workflow tool should look elsewhere, as that's where Photoshop shines. The Design panel is also pretty easy to navigate and help is readily available for the bewildered. Just be careful not to let your monitor go any darker than it was designed to go, as you may get an ugly black line down the center of your screen. In too dark a room, this will render the screen nearly unusable. This preview is an early look at the features coming to the Windows application, or "ported over" to the Mac version, in the coming months. We'll have to find out when the Windows preview will release once Creative Cloud customers upgrade. So if you don't have an active subscription right now, it probably won't be till early next year. This has become a standard set-up for much of the photography in this review. If you've been reading our posts for a while, you'll know that it's a hard look at the iPad Pro in tandem with Adobe Photoshop CC in the process. If you're reading this after we've left our camera hooked up for a few days, it may be a little tough to evaluate. Since this is an early look at iOS 10, we'll have to wait and see how awkward the new gestures are and what, if any, changes artist will have to make to get used to the new editing environment. That, and the new features that make an early preview of the Mac version of the software available.

Here are a list of some of the most powerful Photoshop features that would help you get the best quality of images and make your designs stand out

Feature	Benefits
Curves	Adjusts the tonal range of an image by dragging the black and white points on the graph. This is done for each channel (red, green, blue, and luminance).
Sharpen	Automatically sharpens an image based on the edge strengths detected by the algorithm.
Auto Tone	Adjusts the colours in an image to make it look more natural. Adjusts the image's average lightness and contrast to aid tonal distribution and reduce the overall sharpness.
Auto Colour	Adjusts the colours in an image to make it look more natural. Adjusts the image's average lightness and contrast to help with colour distribution.
Remove Red Eye	Automatically fixes and enhances your red eye. This feature is especially useful for non-digital still images, where the red eyes have been added on purpose.
Channels	Creates a new layer based on the concept of channels. A channel is the base information of an image, such as color, brightness, etc.
Blur	Blurs the image to make it look smoother while maintaining the details.
Focus	Sets an object to appear sharper. This feature works in the same way as in the Focus of the Lens Blur filter.
Emboss	Embosses the edges of a scratched, embossed or impressed surface.
Oil Paint	Paints texture in an image using very fine brushes.
Vignette	Cheats the lighting in an image to make objects look darker.
