I do found some issues with Lightroom 5. For example, when I brought in a large catalog of photos, it crashed my computer. I had to force quit it, then restart my computer, and ICS went through its normal reboot routine. The good news is that Lightroom 5 now automatically acquires photos from memory card much faster. On my laptop, that means I can import a lot of photos into in a matter of seconds instead of waiting the whole time. I also like that Lightroom 5 is more intuitive than previous versions. Overall, I am very pleased with the update. Lightroom 5 has some well-thought-out new features, such as organizing photos by the time they were taken, the location they were taken, and the event they photo were shot for; tagging photos with the date they were taken; and "note tagging". All of these features are nicely thought-out and, although they do not compete with most of the instant features, they do allow users to sift through and organize photos that might otherwise be hard to find. Vision shows you a "heat map" of your photos depicting where on the image sensor your photons hit and where the overall brightness is. You can adjust for this data, and then choose what you consider to be the best values for your photo. Adobe also added a feature to preview your images with this new tech for that helps people decide if what they see on their display is what they will actually see when they print their images. If you're a budding photographer, you'll be able to use this tech to learn how your camera performs so you can better match the output of your camera with the intended display when printing your images. Adobe is also working on a new interface for Layouts. The most exciting part of Layouts is the ability to reorder your photos and videos by order of appearance or other date they were added are just a few clicks away. Layouts has also had another major upgrade to make it much more appealing to new users. After using Layouts for a while, veteran photographers may miss the drag-and-drop ability to layer images, but the automated adjustment tools have certainly improved the utility of this tool.
