To install Adobe Photoshop on your Mac, follow the steps below:

1. First, turn off the computer and then turn it back on.
2. Then, go to the top right corner of your screen and click on the Apple symbol.
3. Once the Apple symbol is visible, click on the **Get Help** icon.
4. Next, click on **Install Adobe Photoshop**.
5. You will then be asked to enter your serial number.
6. After the serial number is entered, your copy of the software will be installed.
7. Once the installation is complete, you can start using the software.

"It's a pretty big value proposition and we feel like people are going to be interested in this offering," said Scott Rybik, Adobe's executive vice president in charge of the cloud and mobile products.

Adobe is also planning a macOS desktop version of the favourite graphics program at some point as well. This may be a long time coming, given that Photoshop continues to be the company's bread and butter For those of you who must have Photoshop for the regular Desktop the update to version 16.1 is not available yet but some of their 'features' I was hoping to get in at some point. Adobe Photoshop is probably my most used software I hope this solves most of my problems with this update because I can't stand it - plus I have a Mac. This is what I was hoping to get - Efficient Memory CleanUp with new memory management feature. I tried it and no go. Collapsed taskbar/menu bar, don't open, in a big black box. This is what should happen when you close Photoshop. Android, iOS, Mac, and Windows - Photoshop on all of those devices (and more) do pretty much the same thing, but these differences will affect how well your graphics images work on those devices. The applications are intended to be used on a computer or tablet, so users may find a few limitations when using the app on a mobile device. Photoshop Elements for Android and iPhone has a universal compatibility mode, which is designed to work on most mobile devices. The mode should be selected in order to use the app on Android and iOS devices.
