Finally, I would like to say that I am a computer scientist by educational background, and I spend much of my time developing server software for work. As such, I have witnessed a lot of "thunder and lightning" in the lecture hall and through blog posts. I just tried the iOS version of the app for the first time and, judging by the first impressions, it's a great example of software design. Clearly, it's built with the developer in mind rather than the end user. The screens and buttons are absolutely identical to the ones you'll find in Lightroom on a macOS computer. Wider gestures are offered for performing common tasks, but mainly to see how other apps behave and how awkward and out of place they feel. This approach may work well for developers, but it's pretty frustrating for a regular user. I felt like I was trying to use a different application, and I honestly could not tell where the iOS version of the photos app ended and the desktop version started. And to make it worse, I have been told that it is difficult to get Adobe to release an iOS version of Photoshop with its own app. At the end of the day, however, I can spend time telling you what's great and what's not about the iOS version of Photoshop, so I will not be preaching about it. I am more interested in what's new and cool than in how neat and polished the app is, as long as it performs to the same standard as the macOS version of photos and Lightroom. And that's another area where Apple and Adobe can be said to be good friends.

The Adobe Photoshop CS6 is probably the most commonly used version, especially by Photoshop pro's.

Getting started with Photoshop is easy, whether you are a beginner or an advanced user.

As with other Adobe products, the more you use Photoshop, the more powerful the tool becomes. If you are a new user, you might want to start with a new computer. If you are going to sell work, you will want a speedier computer.

Generally, beginning Photoshop users put the computer to sleep and wake it up later when they are ready to use Photoshop. This minimizes how long it takes Photoshop to start. However, if your computer frequently starts up again, it will save you money and make Photoshop work faster. If this is the case, then you should leave your computer on for a more extensive period of time. If you frequently use Adobe Photoshop on a daily basis, a more powerful computer will work best for you. If you frequently go shopping, working and flying on a graphic design, you will want to invest in faster, more powerful computers.
