The Resize tool is essentially a graphical ellipsis. Holding the Shift key and clicking on an area deforms that area, taking into account all the layers in the layer stack. If you click on an area that has "layer effects" applied to it, the tool applies those effects to the layer. Any subsequent Resize tool clicks will take these effects into account. Also, if you deselect your selection, the tool recalculates to take that into account. Step 13 takes part of a Curves panel and creates a new Curves adjustment layer. Remember, this is a layer on top of the standard alpha layer. You can duplicate this as many times as you need. Use the Curves tool to adjust the foreground and background colors. You can zoom in to the image and use the adjustment layer to fine-tune the gradient. When you are done tweaking, you can make more Curves adjustments on any other layers. The Curves tools are attached to an area for easy editing. Any selection tool adds or removes points. After you have made a selection, you can begin adjusting the curve, duplicating the curve, and so on. Also, there is a second Curves adjustment layer. Use this to adjust highlights and shadows, if needed. You can use the Curves adjustment to tweak these less easily than with a second layer of easily accessible Curves adjustments. If you have auto-deskew turned on, the effect is the same as if you'd zoomed slightly to the top or bottom of the image and rotated the picture. The pixels directly above and below the line are moved up or down in a line. This is a convenient editing tool, one I use on occasion for making vertical lines a specific height.

For example, the team invested a great amount of time in improving native native layers and masks in the new Photoshop. These layers and masks enable users to view and edit large amounts of layers in editable view at the same time, offering higher fidelity and richer interactions compared to any other third-party application. Similarly, the team worked on how information from the Social Feeds panel, which has been added to Photoshop in the past couple of versions, would be efficiently displayed and navigated in existing workflows. This new feature delivers curated content from the social feeds into the panel so that you can conveniently keep up with new tools or popular tutorials. Currently, there's a big debate among professionals and students about whether Photoshop should be used only on photos or also on vectors. The Wacom team will enable many of Photoshop's selection tools to work with images in the browser, and they hope that this will encourage more people to try out vectors. If people learn to use the vectors features in Photoshop without using a Wacom tablet, it's also possible that people who are used to vector art applications will start using Photoshop. In terms of brushes, the Brushes team is working on ways to improve the brush tool on the Web. In the future, people might be able to use brushes in Photoshop to create unique content.
